## Economics(030)

Q-17	Yes, I agree with the given statement that Infrastructure
	) contributes directly to the economic development of
	a country. This is because of following reasons:
	•
	1. Infracttructure increases the productivity of factors
,	of production - land, labour, capital and entreprenuer
~ 1	- and enable them to would with greater efficiency
	2. Infrastructure helps in increasing the output of all
5, 6, m, C	
A material	and ferticuy (service)
	3. Infrastructure induces investment in the Economy.
	and creates a conducive environment for business.
, , , , , , , , , , , , , , , , , , ,	
	4. Infrastructure directly generates employment in the
	nation for various puoductive activities.

		······································
Q-2-J	It is given that 75% of the increase in income is s  consumption.  Therefore, MPC = 75% or 0.75	pent on
	Now, Investment multiplier (k):	
	1-MRE K = 1 = 1 1-0.75 0.25	(from (b)
	:. K = 4	f
	Now, It can be calculated as $K = \Delta Y$ ,	2.
	where DI = Change in the Investment	
	DY = change in the total income	
	Here, DI is given as ₹ 1000 Cr.	
	:. DY = K x DI (From (23)	1
İ		f

4 × \$1000 CM £ 4000 G ... so the total increases by \$ 4000 Gores. 2-3.) The given statement is Refuted Excless Demand refers to a situation when Aggregate Demand (AD) exceeds Aggregate Supply (AS) corresponding to full employment level of output. so, the economy is already at full employment and no more oppositurities for employment exist. Therefore, Excess Demand doesn't create greater employment oppoutunities, instead, it leads to rise In the general price level leading to inflations.

	process
<u> </u>	
0-57	The informal sector comprises of all those private
.—	enterprises that employ less than 10 hired workers.
,	There are several problems associated with this sector:
	1. The enterprises and the workers there generally do not
4	get regular income as were as regulation and protection
,	for from the government
	2. The labour laws generally do not apply to this sector, ')
	leading to exploitation of the workers and lack
	of social security programmes
:	3. The enterprises in this sector generally do not

	••••
	79
,	maintain any financial accounts and the technology used here
	is also nut dated one.
<u>;</u>	•
	4. The workers of this sector have no job security and one
L. Walter and Control of the Control	dismissed without any compensation. Moreover, the worker
	of this sector generally live in slums and one squatters
·	
	So, we may say that the informal section suffers from hefty
	problems which needs to be addressed at the earliest.
ş	, ,
0-6-	a) Payment of indirect Taxes by the firm are NOT included
· _//	in the estimation of national income. This is because
	/ indirect taxes one those taxes imposed by the
	government on the production and consumption of goods
	and services. No direct benefit is gained from such taxes.
	So, they are merely transfer payments which do
	not add to current flow of goods and services.

b) Purchase of goods by foreign tourist WILL BE
included in the estimation of National Income
This is because these purchases one actually
expouts for the nation and bence, will be added
as Net Exports under the Expenditure Method.
2.7.] Environmental Crises refers to a situation when the
environment is not able to perform its third vital
) function of sustainance of life, i.e There exists
/ and immense pressure and burden on its.
(anying capacity? due to human practices.
Environmental crisès impacts the resources adversely:
1. It leads to a cituation where the rate of resource
extraction is more than the rate of resource
regeneration, i . c resources ave used facter than
they are replenished.

	2. The intensive and extensive extraction of both renewable
	and non-renewable resourses teads to exhaustion of
	some vital resources and we are compelled to spend
	an increased amount on Fechnology and research to
	explore new resources
	so, the resources one exploited and their reserves one.
	depleted are to overuse and misuse
	Hence, environmental crisis generally arise out of
	increasing population of developing countains and affivent
	production - consumption Standards of developed nations
	leading to pollution, exceeding waste generation and
-	resource depletion

Q-8] The Great Leap Forward campaign (GLF) was initiated in China in the year 1958, which aimed at  Industrialising the nation at a massive scale through backyard industries and communes.  However, it had to face some problems:  1. Severe Drought  in China, killing almost 30 million people, this:  acted as a severe hindrance and gave a serback to the campaign.  2. Confficts with Russia  when China had conflicts with Russia, it withdrew its professionals sent to china to help in

industrialisation process. This also led to a slowdown the compaign and adversly affected its results. so, the GLF campaignes failed are to there hindrances. This led the Mao introduce the Great Proleterian cultural Revolution in 1965 which extend from 1966-76. Q-9.] Annual growth Rate of population refers to the percentage by which the total population of the country increases over the year as compared compared to previous year. From the given data table, we can infor the following re understandings: The annual growth rate of population of India stood at 1.2% in 2015, which was for above than China at 0.5 % only. So, India witnessed a

	higher population growth.
<u></u>	
	2. One of the reasons of China's low growth rate.
	of population could be the One Child Norm'
	introduced in late 1970s to control population,
<u> </u>	where the couples were allowed to have only
	one child. Although the restrictions were liberalised
	later to two children, yet the growth of
	population remained mild.
	3. India did not witnessed any such population-control
- +	measures over the time which led to high
	population growth. Also, illetracy played a
	cignificant role there.
•	4. The data also reveals that there is a pressing
	need to control population in India in order to

,	
	It is one of the major hindrances for Indian development
	as it leade to oversuse of resources and full inquality
<u> </u>	of life.
0-10]	Bank Rate refers to the rate of interest at which RBI
, , , , , , , , , , , , , , , , , , ,	(The central Bank) rends funds to the commercial banks
	for productive purposes for long term.
	There exists an inverse relationship between Bank rate
	and aggregate demand in the Tecomo: economy for credit.
,	
	1. When the Reserve Bank of India (RBI) increased the
,	Bank, Rate, it will make the boundwings from RBI
	costlier for the commercial banks.
	2. In order to cover the costs, the commercial banks,
	in turn, will increase their lending rate to the

•	general public and the business enterprises.
	3. This will make the borrowings from commercial
	banks coefficer for the general public. As a
1990 1-7-19	result, the households and business enterprises
	. will discourage the borrowings
-	So, it will at last lead to an overall drop in
	the total demand for credit as it becomes costlier.
Q-11.]	(Q.)
7-2-2-112-

- (ii) Final Goods refers to those goods which are either meant for consumption or for investment.

  On the other hand, intermediate goods are those goods which are meant for resale or for further production.
- 1. During the production process, the intermediate,
  goods are processed and converted into final goods (
- 2. So final goods already include the value of intermediate goods in them.

	Therefore, there is a need to make distinction between
	final and intermediate goods so that we don't count
	the value of intermediate goods twice. The distinction
	will help in avoiding the problem of Double Counting!
	For ex: If a bread manufacturer selle bread worth \$1000
	worth \$ 2000 to general public, then the value
	of cake already includes the bread's worth.
	Hence, it need not be seperately added.
10-12	Deflationary gaps: refers to the gap by which the actual aggregate Demand falls shout of the aggregate Demand
_	required to achieve full employment equilibrium in an
	economy.
	So, in order to correct the deflationary gap; the

government and RBI tend to increase the demand and money supply through various measures. Repo Rate and Reverse Reportate come under the monetary policy of Reserve Bank of India. (RBI) ous a quantitative instrument. Their roles one as follows: (i) Repo Rate (Repurchase Rate) Repo Rate is the rate at which the RBI lends funds to the commercial banks for productive

purpose for shout term.

1. During deflationary gap The RBI tends to . <

decrease the REPO Rate.

· 2. This makes borrowing from RBT cheaper for

the commercial banks

3. As a response, commercial banks will decrease their - lending rates to general public and enterprises

This will make borrowings exemper for households and business firm

Hence, it will encourage borrowing and will lead to an increase in the aggregate densand till the deflationary gap is corrected.

@ Reverse lepo Rate.

Reverse Repo Rate refers to the rate at which commercial banks park their excess funds with RBT to earn interest.

1. In this situation, the RBI tend to decrease the Reveise Repo Rate. This means that the commercial banks witt get lower interest on the funds with RBT. 2. This will encourage the commeilial bank to lend more funds to general public and keep lest funds with RBI 3. As a result; the overall money supply in the economy will increase teading to rise in aggregate demand:

This will continue till the deflationary gap

gets corrected
